RE: Calibration of DS18B20

Dear Valued Customer:

In addition to the simple go/no_go production testing that we do on every product we make, Maxim Integrated Products calibrates every single DS18B20 to ensure the accuracy of the temperature readings is in accord with the published datasheet. Each individual chip is adjusted as necessary to bring it into compliance. The production test equipment we use to do this job is calibrated using standards that are traceable to NIST.

Sincerely,

A handwritten signature in cursive script that reads "Philip A. Adams".
